GASTRIC CANCER AI - DIGITAL PATHOLOGY REPORT

Automated Histopathological Classification & Grad-CAM Explainability

2026-10-30 14:05

Patient Name: gf

Case / Patient ID: 8684

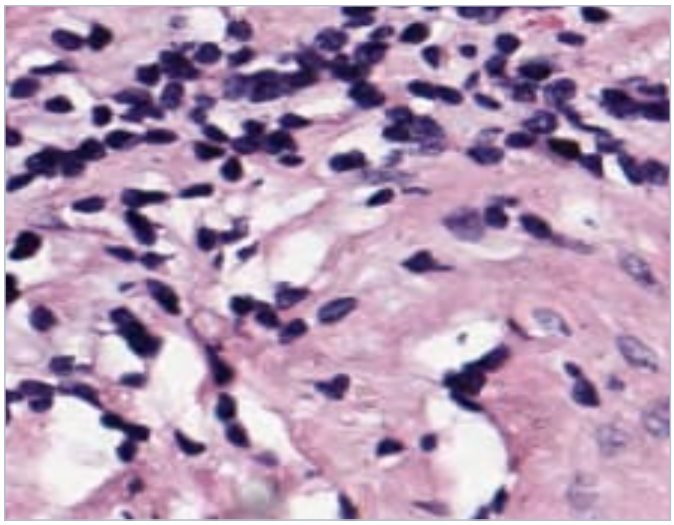

Age / Gender: N/A / Unspecified

Specimen: Gastric Tissue Biopsy (H&E Stain)

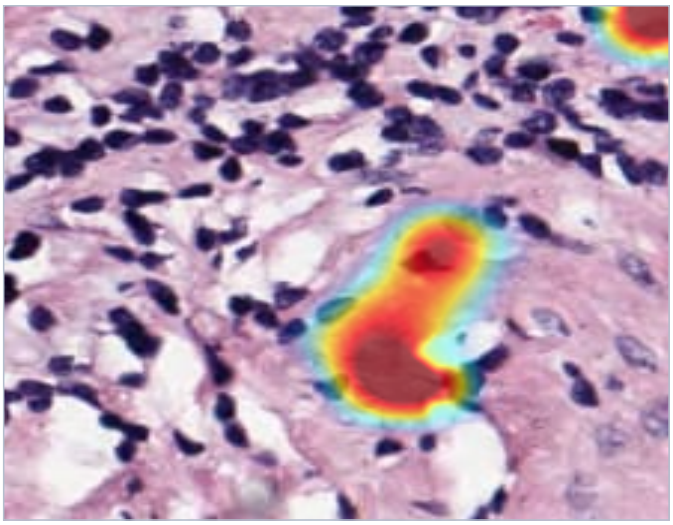

AI PREDICTED CLASS: Lymphocytes & Immune Infiltrate (LYM)

Confidence Score: 88.73% | Analysis Status: Passed Quality & OOD Checks

Original Histopathology Specimen

Grad-CAM++ Explainability Map

Microscopic Description & Histopathological Features

Characteristic Features: Dense aggregates of small, round, hyperchromatic mononuclear immune cells forming lymphoid aggregates or diffuse stromal infiltration.

Clinical Significance: Tumor-Infiltrating Lymphocytes (TILs) are key biomarkers for MSI-H status and positive response to immune checkpoint inhibitor therapies.

Comprehensive Class Probability Distribution

ADI	DEB	LYM	MUC	MUS	NOR	STR	TUM
0.0%	4.5%	**88.7%**	0.4%	0.4%	0.3%	5.3%	0.4%

Important Diagnostic Disclaimer & Notice:

This report was automatically synthesized by the Gastric Cancer AI Digital Pathology Engine using transfer learning and Grad-CAM explainability algorithms. It is strictly intended as a computerized decision-support and academic research tool. Final pathological diagnosis, staging, and therapeutic interventions require formal microscopic verification and clinical integration by a licensed pathologist and multidisciplinary oncology team.
