GASTRIC CANCER AI - DIGITAL PATHOLOGY REPORT

Automated Histopathological Classification & Grad-CAM Explainability

2026-10-28 16:34

Patient Name: Bob Smith

Case / Patient ID: P999

Age / Gender: N/A / Unspecified

Specimen: Gastric Tissue Biopsy (H&E Stain)

AI PREDICTED CLASS: Normal Gastric Mucosa (NOR)

Confidence Score: 94.20% | **Analysis Status:** Passed Quality & OOD Checks

Microscopic Description & Histopathological Features

Characteristic Features: Preserved glandular architecture featuring regular foveolar mucin-secreting epithelial cells, parietal and chief cells with intact basement membranes.

Clinical Significance: Demonstrates benign, non-neoplastic gastric tissue without architectural atypia, dysplasia, or malignant infiltration.

Comprehensive Class Probability Distribution

ADI	DEB	LYM	MUC	MUS	NOR	STR	TUM
82.9%	82.9%	82.9%	82.9%	82.9%	**94.2%**	82.9%	82.9%

Important Diagnostic Disclaimer & Notice:

This report was automatically synthesized by the Gastric Cancer AI Digital Pathology Engine using transfer learning and Grad-CAM explainability algorithms. It is strictly intended as a computerized decision-support and academic research tool. Final pathological diagnosis, staging, and therapeutic interventions require formal microscopic verification and clinical integration by a licensed pathologist and multidisciplinary oncology team.
